One of his most popular topics is ARDL modeling, ... This requires pre-testing for the presence of a unit root in each of the variables under consideration, which is clearly subject to misclassification, particularly since unit root tests are known to suffer size and power problems in many cases of interest; see Perron and Ng (1996). Alternatively, the PSS(2001) bounds test for cointegration ...

Although ARDL cointegration technique does not require pre-testing for unit roots, to avoid ARDL model crash in the presence of integrated stochastic trend of $I(2)$, we are of the view the unit root test should be carried out to know the number of unit roots in the series under consideration. This is presented in the next section.

While it is understood that a well-defined research problem is the heart of the research project, therefore it is important to make sure why the researcher is trying to investigate a problem. In other words finding the research gap is one the most important part of any research. While stepping into drafting the research proposal, it can be known that there are some areas which are researched ...
